RAJESHWAR SINGH

Software Developer

9119222577 | rajeshwar.singh45411@gmail.com | github.com/rsr11 | linkedin.com/in/rajeshwarsingh11

SUMMARY

Software Engineer with 1 year of experience building server-side logic, relational databases, authentication/authorization, and REST APIs for multi-tenant SaaS platforms. Cut API latency by 95%+, built and secured 30+ REST APIs with JWT/RBAC across 5+ roles, and designed isolated multi-tenant database architecture. Experienced with Docker, shell scripting, and cloud monitoring (CloudWatch) for backend deployment. Comfortable working with cross-functional teams in Agile/Scrum environments to ship scalable, well-documented solutions.

TECHNICAL SKILLS

Back-End & APIs: Node.js, Express.js, REST APIs, WebSockets, SSE, JWT Authentication & RBAC, Kafka, Java, Spring Boot, Python, PHP

Front-End: React.js, Next.js, React-query, TailwindCSS, Angular

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Deployment: Docker, Nginx (reverse proxy & API access control), AWS (S3, SQS, CloudWatch, Route 53), Utho, CI/CD, Prometheus, Grafana

Integrations: Zoho Payment Gateway, Meta WhatsApp API, FFmpeg

Architecture & Testing: Multi-tier/distributed systems, multi-tenant SaaS design, microservices concepts, manual functional & integration testing, debugging & root-cause analysis.

Tools & Practices: Git, GitHub, Figma, JIRA, Agile/Scrum-based iterative delivery, Claude AI, shell scripting

EXPERIENCE

Software Engineer — MediSetu – Appointmydoctor(product for user) link / (product for clinic) link ***May 2026 – Present***

- Core engineering team member building a healthcare SaaS platform for appointment booking, patient management, and laboratory operations, using React.js on the front end and Node.js/Express on the back end.
- Optimized backend APIs and database queries, reducing response latency from 100–200 ms to 3–5 ms, improving reliability and performance for production users.
- Deployed and maintained the platform's backend infrastructure end-to-end using Docker, AWS CloudWatch, and Utho, and configured Nginx as a reverse proxy to route traffic and block irrelevant/unauthorized API endpoints.
- Integrated the Zoho payment gateway for bookings/invoices and the Meta WhatsApp API for patient communications; implemented Server-Sent Events (SSE) for real-time in-app notifications.
- Integrated ABHA (Ayushman Bharat Health Account) for patient health ID linking.
- Collaborated with product and business stakeholders in an iterative, sprint-style workflow to align technical solutions with real clinic operations.

Full Stack Developer — Kuchoriya TechSoft ***Feb 2026 – May 2026***

- Designed a multi-tenant, distributed architecture with isolated per-company databases for a SaaS CRM platform.
- Built and maintained 30+ REST APIs (Node.js/Express) with JWT authentication and RBAC across 5+ user roles, applying secure, testable engineering practices.
- Integrated HLS (m3u8) adaptive video streaming with AWS S3, supporting large media files (5GB+) with optimized playback across devices.

MERN Developer — Bharg IT Solutions ***Feb 2024 – June 2024***

- Migrated a Hospital ERP Management system's backend from .NET to Node.js and Express, modernizing legacy business logic while preserving core functionality.
- Implemented React Query for server-state management, caching, and background sync, improving data-fetching efficiency and UI responsiveness.
- Reduced cumulative layout shift (CLS) and improved page-load performance through prefetching and efficient API consumption patterns.

Freelance Full-Stack Developer — Self-Employed ***Aug 2024 – Present***

- Design, build, and deploy end-to-end websites for independent clients alongside full-time work, including legacy-marble.com and skill-tyro.com, using GSAP, Framer Motion, and Three.js for animated front-end experiences.
- Delivered projects across varied backend/CMS stacks — Django, Flask, PHP, and Shopify — adapting the stack to each client's needs and budget.

PROJECTS

Employee Learning Management System (Spring Boot)

- Built a full employee training/course management system with a Java Spring Boot backend, REST APIs, and a relational schema (MySQL/PostgreSQL) consumed by a separate front-end client, where Angular.js is used.

Blood Finder — Smart India Hackathon

- Built a React-based web app that locates the nearest blood bank during emergencies and connects users directly.

EDUCATION

Master of Computer Application (MCA), JECRC University, Jaipur *Aug 2024 – July 2026*

Bachelor of Computer Application (BCA), JECRC University, Jaipur *Aug 2021 – July 2024*
